

This is a two-column layout document designed to test multi-column extraction.

The text flows in the left column first, demonstrating newspaper-style layout.

Column detection is essential for maintaining proper reading order.

This left column contains the first half of the content.

The text continues in the right column, maintaining logical flow.

Extractors must correctly identify column boundaries.

This ensures content is read in the correct order.

Two-column layouts are common in academic papers and magazines.
